money makes the world go round the financial sector currently faces unprecedented challenges first it must find a way to overcome the credit crisis and once the tempest has subsided banks insurance companies and pension funds will have to undergo a number of far reaching structural changes globalization will give rise to an

within the cacophony of voices trying to explain the recent financial crisis elena esposito s voice sounds clear and deep steering away from simplistic condemnations and equally simplistic prescriptions for betterment she connects the very invention of derivatives to that eternal human hope of controlling the future while the task is impossible the attempts never stop and the very process of attempting it brings some consolation and while derivatives can be seen claim sociologists of finance as performative that is shaping the future they promise to control even this is far from certain esposito s fascinating and beautiful work is an important contribution to the sociology of finance a subdiscipline of sociology that took on itself an extremely important task of explaining how the finance markets really work barbara czarniawska university of gothenburg sweden this is a brilliant and timely book that shows how financing is centrally implicated in the very unpredictability and uncertainty it purports to master with the incisiveness characteristic of her style and writing esposito reads economics in innovative ways that

disclose the hidden premises by which financial instruments trade and consume the prospects of the future jannis kallinikos london school of economics uk elena esposito s analysis of financial markets and of their recent decline is radically different from the analyses which can be found in economic journals or books financial operations are reduced to their basic dimensions time and money under this perspective what is sold on financial markets is the possibility for the creation of commitments in the course of time the possibility for the combination of these commitments with one another and the identification of chances for the achievement of profit opportunities through the creation of specific combinations the author argues that the recent crisis of the financial system was caused by oversimplified visions of the future and of risk leading to the consequence that options were not available in the present because all possibilities had been used up by the future this oversimplified vision of the future imploded and trust with it the state tried to reconstruct options for the future in order to open up new possibilities and chances for learning the author does not deliver recipes on how to prevent severe crises of the financial system in the future yet her concept facilitates understanding of how financial futures are opened up or closed and thus provides insights into basic principles on whose basis future opportunities can be kept open and trust can be maintained innovative reforms of the financial system can only develop on the basis of unconventional analyses elena esposito s book contains an analysis of this kind alfred kieser mannheim university germany elena esposito s book is a fundamental analysis of time in economics with economic rigour underpinned by sociological reasoning she explains the futures market more clearly than is possible with economic analysis alone economic concepts are considered in terms of time actors deal in the present with future risks by transferring these risks to the present situation as a result we get more options and more risks at the same time at present no equilibrium will balance these trades because of the asymmetry of time our actual decisions deal with our imagination of the future that is with the future of the present but the results will be realized in the presence of the future different modalities of time the book is a sound reflection on modelling time in economic theory a must for economists birger p priddat witten herdecke university germany the future of futures is an original and intellectually provocative book which forces the reader to think esposito s essay fulfils two rather different functions on the one hand it brings new and persuasive arguments to bear against the erroneous thesis that the present financial crisis is merely due to human mistakes and to some specific government failures on the other hand the book suggests that only by reconsidering the role of time in the economy is it possible to make full sense of the crisis and to re orient in a desired direction the future movements of money it is a well known fact that traditional economics has always adhered to a spatial conception of time according to which time like space is perfectly reversible whence its inability both to understand how economies develop and to prescribe adequate policies the author s proposal is to move steps ahead in the direction of an analysis of an economy in time where both historical time and time as duration can find a place esposito s well written jargon free book will capture the attention of anyone seriously interested in the future of our market systems stefano zamagni university of bologna and johns hopkins university bologna center italy this book reconstructs the dynamics of economics beginning explicitly with the role and the relevance of time money uses the future in order to generate present wealth financial markets sell and buy risk thereby binding the future elena esposito explains that complex risk management techniques of structured finance produce new and uncontrolled risks because they use a simplified idea of the future failing to account for how the future reacts to attempts at controlling it during the recent financial crisis the future had already been used through securitizations derivatives and other tools to the

extent that we had many futures but no open future available

how to use finance as a tool to build a more equitable and sustainable society money defines our present and will shape our future every investment decision we make adds a chapter to the story of what our world will look like although the idea of mission based finance has been around for decades there is a gap between organizations stated intention to do good and meaningful impact still some are succeeding in just money katrin kaufer and lillian steponaitis take readers on a global tour of financial institutions that use finance as a force for good

as the global economy continues to weather the effects of the recession brought on by the financial crisis of 2007 08 perhaps no sector has been more affected and more under pressure to change than the industry that was the focus of that crisis financial services but as policymakers financial experts lobbyists and others seek to rebuild this industry certain questions loom large for example should the pay of financial institution executives be regulated to control risk taking that possibility certainly has been raised in official circles with spirited reactions from all corners how will stepped up regulation affect key parts of the financial services industry and what lies ahead for some of the key actors in both the united states and japan in after the crash noted economists yasuyuki fuchita richard herring and robert litan bring together a distinguished group of experts from academia and the private sector to take a hard look at how the financial industry and some of its practices are likely to change in the years ahead whether or not you agree with their conclusions the authors of this volume the most recent collaboration between brookings the wharton school and the nomura institute of capital markets research provide well grounded insights that will be helpful to financial practitioners analysts and policymakers
